

ATHARVA AGALE

Software Developer | Web Development (React / Next.js) | Python
atharvaagale64@gmail.com | github.com/Fermi21

PROFILE

First-year Information Technology student building web applications with React, Next.js, and Python, with project work spanning interactive UI tooling, geospatial data visualization, and applied machine learning. Comfortable working across the stack and picking up new tools quickly, with a strong foundation in math-driven problem solving. Also writes technical and AI-focused content, with 10+ articles contributed to a defence blog.

EDUCATION

Aditya Engineering College Beed
B.E. Information Technology 2026 – Present

PROJECTS

- CSS Button Factory** *HTML, CSS, JavaScript*
 - Built an interactive dashboard where users adjust sliders and color pickers to design custom UI buttons in real time.
 - Generates clean, copy-paste-ready HTML/CSS output from the live design, removing manual styling work.
- Geospatial Data Visualizer** *Python, PostGIS, GPU-accelerated web frameworks*
 - Built a tool to map, analyze, and animate large geographic datasets using GPU-accelerated rendering for smooth interaction.
 - Used Python spatial libraries and a PostGIS database to store and query geographic data efficiently.
- Air Defense Radar Tracking & Ballistic Predictor** *Python, Scikit-learn*
 - Simulated missile flight paths using physics-based equations to model trajectories.
 - Applied Scikit-learn regression models to estimate real-time impact zones from noisy, simulated radar data.

WRITING EXPERIENCE

- Content Contributor** (Anonymous / Ghostwritten)
Defence Blog
 - Wrote 10+ articles covering defence technology, military affairs, and current developments for a defence-focused publication, published anonymously under the platform's byline.
 - Researched and fact-checked technical and policy-heavy source material to produce clear, accurate articles for a general audience.
- Independent Writer** (Self-Directed)
AI Tools & Technology Research
 - Write and review AI tools (ChatGPT, Claude, Gemini, and others), comparing capabilities and use cases.
 - Research emerging AI and technology trends and turn findings into structured, SEO-aware written content.

SKILLS

Languages & Core:	Python, JavaScript, HTML, CSS, Math (applied to ML/physics modeling)
Web Development:	React, Next.js, HTML/CSS, JavaScript
Tools & Platforms:	Git, GitHub, PostGIS
Machine Learning:	Scikit-learn
AI Platforms:	ChatGPT, Claude, Gemini
Writing:	Content Writing, Technical Writing, AI Tool Reviews, Prompt Engineering, Defence Writing, SEO Writing
UI/UX Design:	Figma, Wireframing, Prototyping, User Research, Design Systems
Spoken Languages:	English, Hindi, Marathi
Other Skills:	Problem Solving, Communication
